DETAILED ACTION

Response to Amendment

1. The amendment received on 8/31/2005 has been reviewed and considered with the following results:

The prior art rejections to the claims made in the previous Office Action mailed on 6/03/2005 are now withdrawn in view of Applicant's amendments, the amendments have been considered but are most in view of a new action on the merits appears below.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hattori (US Pat. 5,459,424).

With regard to claim 1, Hattori discloses in Fig. 1 an integrated circuit comprising a CMOS inverter (21), the output of the CMOS inverter being coupled with an input buffer (22); a first capacitor (27) being inserted between the output of the CMOS inverter and a first voltage source (Vcc); a second capacitor (28) being inserted between the output of the CMOS inverter and a second voltage source (GND). Fig. 1 of Hattori shows a circuit meeting all of the claimed limitations except that the input of the CMOS inverter being coupled with an input terminal (I) instead of an input pad as recited in the claim. However, one of ordinary skill in the art would

infer that both input pad and input terminal, of the CMOS inverter above, is just simply an input node to the CMOS inverter. Therefore, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention was made to utilize the circuit of Hattori wherever it needed most including at the input pad, for the expected advantage of being able to reduce noise at that input node, which are in each case optimally matched to its application.

With regard to claims 2 and 3, the above discussed circuit of the references meets all of the claimed limitations except that Hattori does not disclose that the integrated circuit is a LSI or a VLSI. However, it would have been obvious to one of ordinary skill in the art to realize that any integrated circuit (many types of which are well known in the art including a LSI or a VLSI as recited in the claims) can benefit from the circuit taught by the references for the advantage of being able to improve the surge protection function of the integrated circuit. Therefore, the claimed invention does not define patentably over the circuitry of the references.

With regard to claims 5 and 6, the references also meet the recited limitations in these claims.

4. Claim 4 is rejected, under 35 U.S.C. 103(a) as being unpatentable over Hattori, as applied to claim 1 above, and further in view of the admitted prior art, Fig. 1 in the present application.

The above-discussed circuit of the references meets all of the claimed limitations except that the buffer circuit (22 in Fig. 1 of Hattori) is not Schmitt-trigger type buffer circuit. The admitted prior art (Fig. 1 in the present application) shows a circuit having the Schmitt trigger (14) as a buffer circuit. Since the admitted prior art and the circuit of the references are similar, it would have been obvious to one of ordinary skill in the art at the time of applicant's invention was made utilize a Schmitt trigger circuit as the buffer circuit (22 in Fig. 1 of Hattori) in the

Art Unit: 2816

references' circuit in order to remove any noise spikes around the threshold point of its input on both the rising and falling edges of the input signal.

Allowable Subject Matter

5. Claims 7-14 are allowed.

The prior art of record fails to disclose or fairly suggest an integrated circuit (11 in instant Fig. 3), having specific structural limitations such as a transition circuit (31), the input of the transition circuit being coupled with an input pad (13) of the integrated circuit, the output of the transition circuit being coupled with an input buffer (14), the transition circuit comprising a Pch MOS transistor (311) and a Nch MOS transistor (312), the source of the Pch MOS transistor and the Nch MOS transistor being coupled with the input of the transition circuit; the drain of the Pch MOS transistor and the Nch MOS transistor being coupled with the output of the transition circuit; the gate of the Pch MOS transistor being coupled with a third voltage source (VDD/2), the gate of the Nch MOS transistor being coupled with a fourth voltage source (VDD/2); a first capacitor (212) being inserted between the output of the transition circuit and a first voltage source (VDD); and a second capacitor (213) being inserted between the output of the transition circuit and a second voltage source (VSS), and being configured in combination with the rest of the limitations of the base claims and any intervening claims.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai L. Nguyen whose telephone number is 571-272-1747 and Right Fax number is 571-273-1747. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 571-272-1740. The official fax phone number for the organization where this application or proceeding is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-1562.

8. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
